

Castagra Ecodur 201 is a revolutionary coating product, ideally suited for municipal applications ranging from: Basin repair, to metal tank repainting, to Manhole rehabilitation, to any other concrete or metal coating project.

Longevity

With applications ranging from marine buoys, to ship decks, to commercial applications, Ecodur has proven itself in the field with over 20 years of performance.

Durability

With 100% resistance to UV and the highest H₂S rating, Ecodur will last longer than other coatings. In addition its ability to flex 180 degrees and elongate 50%-100% gives it the ability to withstand stresses on a Municipal jobsite without cracking and failing.

Quick Installation

With the unique ability to apply with one coat and no primer, you can finish your project in hours and days instead of weeks, often without having to bring down your whole system.

Thickness

With an industry leading, quick cure time, you can lay Ecodur on to almost any thickness. This allows you to even out surfaces and imperfections without having to apply additional fillers.

Ability to recoat

Unlike all other coatings, Ecodur is easily recoated for the life of the product. This allows quick reapplication without having to perform expensive and timely re-prepping.

Lower Cost

With one coat coverage and less prep work, your projects will cost less. Past projects typically come in 20%-30% less than traditional coatings.

Totally Green

Ecodur is a totally green product, its main components are Castor Bean and Gypsum. There are NO VOC's and NO solvents required during the application. This ensures an odorless jobsite and no costly disposal fees.
